Tramonto del Sole al  
solstizio d'estate

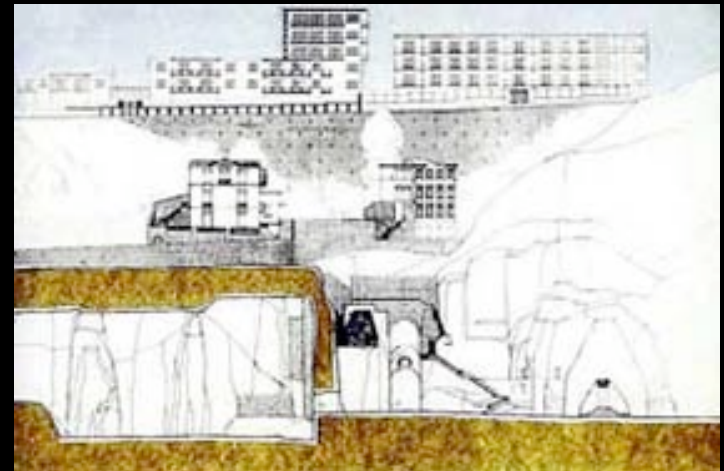

***Nell'esistenza di una città intervengono trasformazioni e distruzioni dei suoi edifici.  
Nella sua persistenza, la natura il carattere e l'espressività del suolo.  
L'architettura del suolo supera nella portata l'architettura degli edifici.  
L'architettura del suolo è sempre archetipa; l'architettura degli edifici è sovente  
legata agli stili.***
